

Week of October 1

PFAS Support. The State of Minnesota and Region 5 have just completed the first year of study of composting and its potential to impact groundwater when done on permeable surfaces. The contaminants of interest are PFAS, metals, semi-volatile organics, volatile organics, pesticides, herbicides, nutrients (NPK), and fecal indicators. Ron Herrmann and Laura Boczek have provided analytical and data verification support in this effort. A technical review memo will be provided to Region 5 later this year. Region 5 has granted the state of Minnesota's request for a second year of analysis and WSD will continue support of this effort.

Participation in Training, October 9, Cincinnati, OH. Maily Pham, Stephanie Brown, Eugenia Riddick, and Dave Griffith will be participating in a free training put on by Thermo Scientific. During this training they will be learning about the latest advances in Chromatography and Mass Spectrometry instrumentation and software.

Follow up on EPANET training
